## Sequencing Making Popcorn

Do you know how popcorn is made? Inside of a popcorn kernel are small drops of water. Each of these water drops is wrapped in a tight white jacket inside the hard shell. When the corn gets hot, the water does too. The water then turns to steam. The steam has to get out of its white jacket, so it blows its top! Pop goes the little white jacket, and out goes the steam. Now you have a bunch of little white jackets called popcorn. Just add butter and salt and yummy!

**Put these sentences in the correct order from 1-5.**

\_\_\_\_\_ Small drops of water are inside a kernel

\_\_\_\_\_ The water turns to steam

\_\_\_\_\_ Each drop of water has a white jacket

\_\_\_\_\_ Pop goes the kernel of corn!

\_\_\_\_\_ The corn begins to get hot
